

Retail Intelligence & Operations Dashboard

**Sales Performance, Product Trends, and Outlet
Operations**

Tools Used: Excel | Pivot Tables | Pivot Charts | Dashboarding

Prepared By: Sneha Mandlik

1. Problem Statement

Retail businesses generate large volumes of transactional data every day. To improve decision-making, management requires visibility into sales performance, product demand, outlet efficiency, customer satisfaction, and operational trends.

This project analyzes BlinkIT grocery sales data to answer the following business questions:

- Which product categories contribute the highest sales?
 - How do outlet size, location, and type affect revenue?
 - What is the overall customer rating performance?
 - Which outlet segments generate the highest sales?
 - What operational insights can improve business performance?
-

2. Dataset Overview

Dataset Summary

Attribute	Details
Total Records	8,523
Total Sales	\$1.20 Million
Average Sales	\$140.99
Number of Items	8,523
Average Rating	3.97 / 5

Key Fields

- Item Fat Content
- Item Type
- Outlet Establishment Year
- Outlet Identifier
- Outlet Location Type

- Outlet Size
- Outlet Type
- Item Visibility
- Item Weight
- Total Sales
- Rating

The dataset represents grocery sales across multiple BlinkIT outlets and product categories.

3. Methodology & Tools

The project was developed using Microsoft Excel.

Analysis Process

Data Validation

- Reviewed dataset structure
- Checked for missing values

Data Transformation

- Organized sales and outlet metrics
- Aggregated sales using Pivot Tables
- Generated KPIs and performance measures

Dashboard Development

- Built interactive dashboard
- Created slicers for filtering
- Designed charts to compare categories and outlet performance

Tools Used

- Excel
- Pivot Tables
- Pivot Charts

- Slicers
 - Dashboard Design
-

4. Analysis & Visualizations

KPI Analysis

The dashboard tracks four primary business KPIs:

- Total Sales
- Average Sales
- Number of Items Sold
- Average Customer Rating

These KPIs provide a high-level view of operational performance.

Product Analysis

Product categories were evaluated to identify:

- Highest revenue-generating products
- Product demand trends
- Sales contribution by category

Outlet Analysis

Sales performance was analyzed based on:

- Outlet Type
- Outlet Size
- Outlet Location Tier
- Establishment Year

This helped identify high-performing outlet segments.

Customer Satisfaction Analysis

Ratings were analyzed to understand customer experience and service quality across outlets.

5. Key Findings

1) Low-Fat Products Drove Higher Sales Performance

Low-fat products generated significantly higher revenue than regular-fat products, indicating a growing customer preference for healthier food options. This suggests an opportunity to expand low-fat product offerings and targeted promotions.

2) Fruits & Vegetables Emerged as the Highest Revenue-Generating Category

The Fruits & Vegetables category consistently outperformed other product categories, making it a key revenue driver. Increasing inventory availability and promotional focus on this category could further boost sales.

3) Tier 3 Locations Demonstrated the Strongest Sales Performance

Tier 3 outlets generated the highest overall revenue, outperforming Tier 1 and Tier 2 locations. This highlights strong market demand in emerging regions and suggests significant growth opportunities through strategic expansion.

4) Medium-Sized Outlets Achieved Optimal Performance

Medium-sized outlets recorded the highest sales contribution compared to small and large outlet formats. This indicates that medium-sized stores offer the most effective balance between operational efficiency and revenue generation.

5) Supermarket Type 1 Was the Leading Revenue Contributor

Among all outlet formats, Supermarket Type 1 consistently delivered the highest sales performance. The results suggest that prioritizing this outlet model could maximize future revenue growth and business scalability.

6. Business Recommendations

- Increase inventory for high-performing products.
- Expand in Tier 3 locations.
- Focus on medium-sized outlets.
- Promote low-fat product categories.

7. Conclusion

The Retail Intelligence & Operations Dashboard provides valuable insights into sales performance, customer satisfaction, product demand, and outlet efficiency.

Through KPI tracking, sales analysis, and dashboard visualization, the project demonstrates how data-driven decision-making can support operational improvements and business growth in the retail industry.

This project highlights practical skills in Excel analytics, dashboard development, business intelligence, and retail performance analysis.
